

Method: Clustering

In the **University of Latvia**, **Līga Valinka** has been trying out the Clustering method with her course on Career Guidance which is run with 12 students.

Here are the steps Līga takes with the class in applying this method:

- She first defines / presents a concept, in this case it was “Career guidance”
- She then divides the students into groups of 3 or 4
- Students are then asked to cluster the concept in groups on a flipchart.
- Students work for about 5 minutes on their group cluster.
- Groups are then invited to present their clusters.
- Everyone discussed the pros and cons of the different clusters.
